

Instant tape sealant

P-301

Uses

P-301 is a "self-curing" duct sealant in tape form for use in circular air distribution systems, where there is a demand for air-tight ducts.

Design

Extensible polyethylene tape with a pressure sensitive adhesive (elastomer) with good adhesion to especially galvanized metal and aluminium. The adhesive is protected by silicone treated release paper, which is torn off in connection with the application.

P-301 is self-adhesive and bonds within 24 hours.

How to install

No heat is needed for the application. The surface must be clean and dry. Make sure the tape overlaps spiral seam and screw heads before pressing the tape down firmly. P-301 should not be stretched more than 3%.

Technical data

Length per roll:	15 m
Thickness:	0,95 mm (±3%)
Colour:dark	grey
Adhesion:	immediate
Max. adhesion:	after 24 hours
Adhesion to galvanized metal:	3,6 kg/cm
Pressure rating:	max 4 000 Pa
Temperature range:	-20°C to +60°C
Fire resistance grade:	DIN 4102 Class I B2
Storage:	dry, max. 2 years in closed package.
